- Participating:** Cornell University Turfgrass Team & National Turfgrass Experts
United States Golf Association

Project Overview

The New York State Integrated Pest Management (IPM) program has established an international reputation for delivering quality programming that results in enhanced management practices focused on reducing pesticide use. To this end, thousands of turfgrass managers are currently using techniques developed and delivered through Cornell based research and extension efforts. Still, there is a majority of turf managers who are unaware, unable or not interested in utilizing the research based information for the purpose of reducing pesticide use.
